H.H.D.Nagahawatta - Research Results & Discussion — Performed descriptive statistics on the dataset, evaluated model performance metrics (MAE, RMSE, R2), conducted feature importance analysis, and interpreted the practical implications for the wedding industry.

W.P Sudasun - Conducted the literature review of traditional vs. AI-based systems, identified research gaps, and managed the data collection process including surveys, interviews, and field data from wedding exhibitions

K.D.P Kulugammana – Provided continuous academic supervision throughout the research, guided the students in maintaining methodological rigor, reviewed the manuscript for clarity and coherence, and contributed to refining the overall structure and quality of the paper.

Dr. D.G.N.D. Jayarathna - Oversaw the research progress, ensured the validity and consistency of the research methodology and results, critically reviewed the study, and offered expert feedback to enhance the scientific quality and presentation of the final manuscript.
